

To whom it may concern:

I would like to express my deepest concerns regarding the BPL situation! I as an A.R.E.S.-R.A.C.E.S. member am very concerned about BPL on power transmission lines. According to the studies that I have reviewed, this will be a major league problem for emergency communications. When all other forms of communication fail as they did in New York on 9/11, how will we communicate urgent health and safety messages! Just think, do you want to trust your loved ones safety with the hundreds of bottom line deregulated companies that are currently operating this nations power grids. The state of the power grid as described by power industry experts, would seem to be the number one reason to deny this potential Bpl nightmare. It may also destroy the high frequency spectrum with interference for millions of people worldwide. I hope that all of the concerned parties at the F.C.C. are aware of these dismal possibilities!

Thanks for your concern!
